

**BEAR CREEK MINING CORPORATION
MANAGEMENT DISCUSSION AND ANALYSIS
FOR THE SIX MONTHS ENDED JUNE 30, 2016**

Introduction

The following Management's Discussion and Analysis ("MD&A") of Bear Creek Mining Corporation (the "Company" or "Bear Creek") was prepared on August 23, 2016 and should be read in conjunction with the interim condensed consolidated financial statements of the Company for the period ended June 30, 2016. All dollar amounts are expressed in United States dollars unless otherwise noted. Additional information relating to the Company, including the Company's annual information form, is available on the System for Electronic Document Analysis and Retrieval ("SEDAR") at www.sedar.com.

Bear Creek's business is the acquisition, exploration and development of precious and base metal properties located in Peru. In addition to its ongoing exploration activities, the Company is advancing its 100%-owned Corani silver-lead-zinc project towards development and seeking to resolve the legal issues regarding the Santa Ana silver project by seeking full restitution resulting from the Peruvian government's expropriation of the project. Bear Creek has no revenues from its mineral properties.

The business of mining and exploration involves a high degree of risk and there can be no assurance that current exploration and development programs will result in profitable mining operations.

Except where otherwise indicated, Bear Creek's exploration programs and pertinent disclosure of a technical or scientific nature are prepared by or prepared under the direct supervision of Andrew Swarthout, P.Geo., President and CEO, who serves as the Qualified Person under the definitions of National Instrument 43-101 ("NI 43-101").

Table of Contents

1) Forward-Looking Information

This document contains "forward-looking information" within the meaning of Canadian securities legislation and "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995. This information and these statements, referred to herein as "forward-looking statements" are made as of the date of this MD&A or as of the date of the effective date of information described in this MD&A, as applicable. Forward-looking statements relate to future events or future performance and reflect current estimates, predictions, expectations or beliefs regarding future events and include, without limitation, statements with respect to: (i) the amount of mineral reserves and mineral resources; (ii) the amount of future production over any period; (iii) net present value and internal rates of return of the proposed mining operation; (iv) capital costs, including start-up, sustaining capital and reclamation/closure costs; (v) operating costs, including credits from the sale of silver, lead and zinc; (vi) strip ratios and mining rates; (vii) expected grades and payable ounces and pounds of metals and minerals; (viii) expected processing recoveries; (ix) expected time frames; (x) prices of metals and minerals; (xi) mine life; (xii) expected exploration and development programs and their timing and success; (xiii) expected taxation rates and structure; (xiv) expected mineralization; (xv) adequacy of cash balances; and (xvi) resolution of disputes with the Peruvian Government. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "optimistic", "expects", "anticipates", "plans", "projects", "estimates", "envisages", "assumes", "intends", "strategy", "goals", "objectives" or variations thereof or stating that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved, or the negative of any of these terms and similar expressions) are not statements of historical fact and may be forward-looking statements.

All forward-looking statements are based on the Company's or its consultants' current beliefs as well as various assumptions made by and information currently available to them. These assumptions include, without limitation: (i) the presence of and continuity of metals at the project at modeled grades; (ii) the capacities of various machinery and equipment; (iii) the availability of personnel, machinery and equipment at estimated prices; (iv) exchange rates; (v) metals and minerals sales prices; (vi) appropriate discount rates; (vii) tax rates and royalty rates applicable to the proposed mining operation; (viii) the availability of financing and expected terms; (ix) financing structure and costs; (x) anticipated mining losses and dilution; (xi) metals recovery rates, (xii) reasonable contingency requirements; and (xiii) receipt of regulatory approvals on acceptable terms. Although management considers these assumptions to be reasonable based on information currently available to it, they may prove to be incorrect. Many forward-looking statements are made assuming the correctness of other forward looking statements, such as statements of net present value and internal rate of return, which are based on most of the other forward-looking statements and assumptions herein. The cost information is also prepared using current values, but the time for incurring the costs will be in the future and it is assumed costs will remain stable over the relevant period.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that estimates, forecasts, projections and other forward-looking statements will not be achieved or that assumptions do not reflect future experience. We caution readers not to place undue reliance on these forward-looking statements as a number of important factors could cause the actual outcomes to differ materially from the beliefs, plans, objectives, expectations, anticipations, estimates assumptions and intentions expressed in such forward-looking statements. These risk factors may be generally stated as the risk that the assumptions and estimates expressed above do not occur, but specifically

include, without limitation, risks related to exploration and development programs and their timing and success; risks relating to variations in the mineral content within the material identified as mineral reserves and mineral resources from that predicted; variations in rates of recovery and extraction; developments in world metals and minerals markets; risks relating to fluctuations in the Canadian dollar relative to other currencies; increases in the estimated capital and operating costs or unanticipated costs; difficulties attracting the necessary work force; increases in financing costs or adverse changes to the terms of available financing, if any; tax rates or royalties being greater than assumed; changes in development or mining plans due to changes in logistical, technical or other factors, changes in project parameters as plans continue to be refined; risks relating to receipt of regulatory approvals; the effects of competition in the markets in which the Company operates; operational and infrastructure risks; and the additional risks described in the Company's annual financial statements and management's discussion and analysis for the year ended December 31, 2015, in the feasibility study technical report for the Corani project dated July 17, 2015 as filed on the SEDAR website (available at www.sedar.com), and in its most recent annual information form. The foregoing list of factors that may affect future results is not exhaustive.

When relying on the forward-looking statements, investors and others should carefully consider the foregoing factors and other uncertainties and potential events. The Company does not undertake to update any forward-looking statement, whether written or oral, that may be made from time to time by the Company or on behalf of the Company, except as required by law.

2) Current Period Highlights

On July 26, 2016, the Company completed its bought deal short form prospectus financing (the "Offering") through a syndicate of underwriters, at a price of Cdn \$3.00 per Common Share for gross proceeds of Cdn \$26,001,000. The Underwriters also exercised their over-allotment option to acquire an additional 1,300,050 Common Shares for additional gross proceeds of Cdn \$3,900,150. Including the proceeds from the exercise of the over-allotment option, the total gross proceeds of the Offering were Cdn \$29,901,150 with a total of 9,967,050 Common Shares being issued. The Underwriters received a cash fee equal to 5% of the gross proceeds of the Offering.

The Company intends to use the net proceeds from the Offering primarily to accelerate the development of its flagship Corani silver-lead-zinc project by: commissioning detailed engineering required to secure a Construction Permit; commencing various pre-construction and infrastructure initiatives; and solidifying its strong social licence and community relationships. A minor portion of the proceeds will be used for general working capital purposes.

Corani Project:

In late 2015 Bear Creek submitted modifications (based on the results of the Corani FS) to its Environmental and Social Impact Assessment ("ESIA") originally approved in September 2013. In January 2016, Bear Creek received approval of the modified ESIA from the Peruvian Ministry of Energy and Mines; a key milestone for the Corani project and an important component of the eventual Construction Permit.

The plans for Corani during the coming months are to negotiate terms and engage an engineering firm to undertake detailed engineering required for the Construction Permit. The

Company will also continue to maintain the community relationships it has worked hard to foster, and will continue to de-risk the project by acquiring the various other permits in preparation for an application for the Construction Permit which is ultimately required to commence development. The Company's goal is to ensure the necessary components are in place to allow the Company to move the Corani project forward should future conditions warrant a development decision. Additionally, over the coming 18 months, the Company plans to commence various pre-construction and infrastructure initiatives such as power and access road works prior to the issuance of the final Construction Permit,

For more details, see section 3.1

Santa Ana Project:

The Santa Ana investor-state arbitration against the Peruvian government, being heard at the International Centre for Settlement of Investment Disputes ("ICSID") is proceeding on schedule. Through this arbitration, the Company is seeking full reparation for, among other things, the Peruvian Government's expropriation of Santa Ana as well as resulting damages to the Corani project. The total damage award being sought, including interest, is \$525M. Bear Creek's Memorial on the Merits (the initial statement of Bear Creek's claim and the relief sought) was filed on May 29, 2015. Peru submitted its Counter-Memorial on October 6, 2015, and the Company submitted its Reply to Peru's Counter-Memorial in early January 2016. Peru's Rejoinder to the latest filing was submitted to ICSID on April 13th, and a final submission from the Company was filed in late May 2016. The oral hearing before the Arbitration Tribunal will take place in Washington D.C. on September 7 - 14, 2016. Following the hearings, and following post-hearing submissions in December 2016 and January 2017, the tribunal will commence its deliberations. A decision on Bear Creek's case is anticipated within the second half of 2017, although there is no prescribed deadline for the tribunal's ruling.

For more details, see section 3.2

Maria Jose Project:

As previously reported, the Company (through its Peruvian subsidiary INEDE) decided to seek an appropriate partner to advance this highly prospective district in order to preserve the Company's cash. The Company previously reported that an earn-in agreement has been entered into with a private Peruvian gold producer to explore and develop this gold-quartz vein system. The Company has signed a definitive joint venture agreement with Analytica Mineral Services S.A.C. ("AMS"); a proven Peruvian tunneling contractor and gold producer. AMS will complete 2,000 meters of tunneling and cross-cuts in the vein systems within one year, at its sole cost, in order to earn a 51% undivided interest in the mineral concessions. Following AMS earning its 51% interest, the two parties will form a joint venture agreement with standard terms including shared pro-rata costs going forward and standard dilution clauses should either party not participate in funding. AMS has secured surface rights agreements with the local community and will commence access road construction in August 2016. The required Environmental Impact Assessment is expected to be approved in September 2016 with tunneling along the veins to commence shortly thereafter. Tunneling is designed to test the continuity of gold mineralization and define resources for potential production.

Other Corporate Activities:

The Company continues taking measures to reduce its overall costs while maintaining its excellent community relations, moving the permitting process forward at Corani, and continuing the Santa Ana arbitration. At the Company's annual general meeting of shareholders, held on June 2, 2016, shareholders ratified and approved the Company's Long Term Incentive Plan (the "LTIP") and Shareholder Rights Plan. The Company anticipates a treasury balance of approximately \$28 Million at the end of December 31, 2016.

3) Development Projects

3.1) Corani Silver-Lead-Zinc Project

The 100%-owned Corani silver-lead-zinc project ("Corani") is located in the Andes Mountains approximately 160 kilometers southeast of Cusco, Peru at elevations from 4,800 to 5,100 meters above sea level. The project consists of twelve mineral concessions that form a contiguous block of ground covering approximately 5,700 hectares.

Current Developments at Corani

During the period ended June 30, 2016, the Company incurred expenses of \$1.7 million on the Corani project. Included in this total are; camp, supplies and logistics of \$0.6 million; community contribution activities totaling \$0.3 million; and salaries and consulting of \$0.7 million.

The Company had \$77.2 million of capitalized acquisition costs related to the Corani project as of June 30, 2016 (December 31, 2015 \$77.2 million).

The Company has budgeted total expenditures for the Corani project of \$6.2 million for 2016, which includes surface rights acquisitions and community contributions, permitting and camp costs.

A number of economic studies of the Corani deposit have been conducted in the past, including a feasibility study entitled, Corani Project, Form 43-101F1 Technical Report, Feasibility Study, dated December 22, 2011 (the "2011 Corani FS"). The Company updated its feasibility study on Corani (the 2015 Corani FS) in 2015 and a summary of these results is presented below. An ESIA was approved by the government of Peru in 2013 and modifications to the ESIA reflecting the results of the 2015 Corani FS were approved by the Peruvian Ministry of Energy and Mines in January 2016.

Summary of 2015 Corani Feasibility Study

The 2015 Corani FS, led by M3 Engineering & Technology Corporation ("M3"), Tucson, AZ with support by Global Resource Engineering ("GRE"), Denver, CO and others, improved upon the mine plan and economics of the deposit envisioned in the previous Corani feasibility study conducted in 2011 by, most importantly, lowering the total capital costs, reducing the footprint and environmental impact, and optimizing the metal recoveries. The primary modifications and optimizations in the 2015 Corani FS include:

- Dry-stacking of tailings, which allows for elimination of a tailings impoundment, fresh water storage dams, most waste dumps, and decreased water usage
- Revision of the mine sequencing plan
- Enhanced metallurgical modeling with higher confidence in recovery predictions

- A more efficient configuration of infrastructure layouts and equipment selection

As a result of these modifications and optimizations, the Corani project will have lower operating costs, reduced total capital costs, improved metal recoveries, a smaller footprint, and less impact on the environment and local communities, which in turn reduces permitting risk.

The Corani deposit has Proven and Probable Reserves of roughly 228 million ounces of silver, 2.8 billion pounds of lead and 1.8 billion pounds of zinc (see NI 43-101 disclosure below). These reserves will provide for average annual production of over 8 million ounces of silver over an 18-year mine life, at all-in sustaining costs of \$3.80 per ounce of silver net of base metal credits. Because of the geometry and grade distribution of the Corani deposit, the first five years of production are expected to be particularly strong, with silver production of over 13 million ounces per year at all-in sustaining costs of negative \$0.15 per ounce net of base metal credits.

Corani will be a significant silver producer and a long-lived operation. While the 2015 Corani FS reduced the total capital requirements of the project to \$664 million, the vast majority of the capital (\$625 million) is required to construct the project, with only \$39 million required for sustaining capital. However, though the capital requirements are front loaded, so too is the production sequence and as a result, payback for the initial capital is expected to occur within 3.6 years of the mine's start-up (see NI 43-101 disclosure below).

The 2015 Corani FS financial model is based on current Peruvian tax and royalty rates and on silver, lead and zinc prices of \$20.00/oz, \$0.95/lb and \$1.00/lb respectively, which represented the three-year backward and two-year forward metal prices at the time, weighted 60:40, in keeping with the Company's policy and industry standards. At these prices, the Corani project is extremely robust, with a net present value ("NPV") of \$660 million (after tax and at a 5% discount rate), and an internal rate of return ("IRR") of 20.6% (after tax). Add to this the very low all-in sustaining costs per payable silver ounce (net of by-products) and it is clear Corani is a valuable silver-base metal deposit that is very highly leveraged to silver; Corani's NPV increases \$120 million for every \$1 increase in the silver price.

Complete details of the 2015 Corani FS are provided in the Company's Management Discussion and Analysis for the year ended December 31, 2015, in its news release dated June 2, 2015, (both of which are available on the Company's website (www.bearcreekmining.com) and SEDAR (www.sedar.com)) and in the Technical Report entitled "Optimized and Final Feasibility Study, Corani Project, Puno, Peru, Form 43-101F1 Technical Report" filed on SEDAR on July 20, 2015. Readers are encouraged to refer to these documents for a thorough description of the 2015 Corani FS results.

Social and Environmental

The Company believes it has maintained good working relationships with the local communities and has continued to operate development activities at Corani without interruption. One of the areas of primary focus for the coming year will be to build on the positive relations with the local communities as the project is advanced. The Company owns 100% of the surface rights covering the mine, waste dumps and plant. The Company is working with the Peruvian government to provide the access rights for the ancillary facilities including the access roads and power.

Importantly, the Company completed a Life of Mine Investment Agreement in June 2013. This agreement was entered into with the District of Carabaya, five surrounding communities, and relevant, ancillary organizations specifying investment commitments over the project life,

including the pre-production period. Under the agreement, annual payments are to be made into a trust designed to fund community projects totaling 4 million nuevos soles per year (approximately \$1.3 million per year), beginning with the first installments in 2013. Payments will remain constant throughout the pre-development phase and during production. Cessation or interruptions of operations will cause a pro-rata decrease in the annual disbursements. As an integral part of the LOM agreement, a trust or foundation structure is established for approval of investments and disbursement of funds. Each of the five communities (Corani (Aconsaya), Chacaconiza, Quelcaya, Isivilla, and Aymaña) has agreed to the formation of committees which will consider and approve investment projects for the benefit of the communities, such as schools, medical facilities, roads, or other infrastructure. The amounts of the total annual investment to be directed towards each community is agreed to and defined in the agreement. Bear Creek is an oversight member of the trust and will assist towards the success of the projects; however, the Company will have no voting powers. In this structure, Bear Creek's intent is to appoint independent members with community social responsibility experience and credibility in order to provide oversight of the foundation's functions in meeting its commitments to the communities and all of its members. Despite the Corani project having not yet reached the development triggers requiring the commencement of payments under the LOM agreements, the Company has paid 2.7 million nuevos soles of the first year contribution of four million nuevos soles. Further community contribution payments are contingent upon certain permits being received from the Peruvian government.

The Company has assisted the communities in forming independent cooperatives for their alpaca breeding and wool fiber businesses. Bear Creek is proud of the results which are now generating significantly improved fiber quality and the region was recently recognized as a producer of the finest wools and weaving products in Peru. In addition, the Company has helped the cooperatives to establish direct marketing contacts with Europe, eliminating the historical middle man transactions and increasing the value of their sales by as much as 400%.

The Company will continue to cultivate the social license it has earned with the Corani communities by maintaining the open, honest, and transparent relationships it has established and by continuing its funding of the community trust established through the LOM Agreement.

The Corani project is designed to meet and, in many ways exceed, international standards of environmental compliance. The design and operating improvements incorporated in the 2015 Corani FS required only a modification of the existing approved ESIA, without the necessity for additional public hearings, as they are entirely located within the previously approved project footprint. Furthermore, as the environmental impact of the proposed Corani operation has been reduced as a result of the modifications described above, the Company anticipates final permitting timelines will shorten and costs will be lower than previously anticipated. The Corani ESIA was modified in late 2015, and the Company received approval of the revised ESIA, which incorporates the optimizations and modifications included in the 2015 Corani FS, from the Peruvian Ministry of Energy and Mines in January 2016.

Going Forward

Bear Creek's plans for the Corani project are to focus on preparing for development of the project beginning with critical permits which include the water permit, power line alignment permits, access road and mine plan permits. A detailed engineering study, required to apply for the Construction Permit necessary to commence development, is being negotiated with two Peruvian engineering and EPCM firms and the engagement of an engineering firm is expected by mid-September. The detailed engineering work should be completed in approximately 9

months from the date of engagement. The Construction Permit is anticipated to take three months from the completion and submission of the detailed engineering study.

The recently completed financing will allow selected pre-construction initiatives, including site access construction, power line construction, and pre-production stripping, to be undertaken over the coming 18 months. Efforts are being made to secure the participation of the Peruvian government in partially funding power and access initiatives, which may reduce the Company's CapEx requirements and reduce the budgets in these areas.

Following approval of the modified ESIA in early 2016, the Company has commenced the process of seeking additional permits for Corani, including the water use and mine plan permits for which the amended ESIA formed a key component. The Company is also continuing the evaluation of potential mine financing options in order to allow it to make opportune and informed decisions should market conditions and commodity prices warrant consideration of a development decision. The goal of these permitting and financing activities is to ensure Bear Creek has the information, permits, approvals and relationships in place to consider a production decision pending issuance of a Construction Permit as early as Q3 2017.

National Instrument 43-101 (“NI 43-101”) Disclosure:

All of Bear Creek's exploration programs and pertinent disclosure of a technical or scientific nature are prepared by or prepared under the direct supervision of Andrew Swarthout, P.Geo., President and CEO, a Qualified Person (“QP”) as defined in NI 43-101.

The 2015 Corani Feasibility Study was prepared by a team of independent engineering consultants. Daniel Neff, PE, of M3 acted as the Independent QP as defined by NI 43-101 and additionally is the QP responsible for the market studies, infrastructure, process plant capital and operating costs, economic analysis, conclusions and recommendations portions of the study. Tom Shouldice, PEng, independent consultant, is the QP for the metal recoveries and metallurgical testing sections. Rick Moritz, MMSA, Principal Mining and Process Engineer, of GRE is the QP for portions of the metallurgical analysis. Terre Lane, MMSA, Principal Mining Engineer, of GRE is the QP for the resource and reserve estimation and mining methods and mine capital and operating cost portions of the study. Laurie Tahija, PE, of M3 is the QP for the plant process engineering portion of the study. Chris Chapman, PE of GRE is the QP for the geotechnical, environmental, infrastructure, waste stockpile and tailings designs were prepared by. Each of these individuals has read and approves the respective scientific and technical disclosure contained herein.

The methods used in determining and reporting the mineral reserves and resources presented herein are consistent with the CIM Best Practices Guidelines. Numbers may not total due to rounding.

Corani Reserve and Resources Estimates

2015 Corani Feasibility Mineral Reserves									
Category	Tonnes (000's)	Silver g/t	Lead %	Zinc %	Contained Metal			Equivalent Ounces	
					Silver Million oz.	Lead Million lb.	Zinc Million lb.	Eq. Silver M oz.	Eq. Silver g/t
Proven	19,855	69.1	1.09	0.72	44.1	478.7	313.4	82.5	129.2
Probable	117,843	48.6	0.88	0.57	184.3	2,289.2	1,470.7	366.5	96.8
Proven & Probable	137,698	51.6	0.91	0.59	228.0	2,768.0	1,784.0	449	101.4

2015 Corani Feasibility Study Mineral Resources in Addition to Reserves							
					Contained Metal		
Category	Tonnes (000's)	Silver g/t	Lead %	Zinc %	Silver Million oz.	Lead Million lb.	Zinc Million lb.
Measured	14,360	32.01	0.34	0.19	14.8	108.4	61.6
Indicated	83,749	25.37	0.37	0.28	68.3	682.2	512.8
Measured & Indicated	98,109	26.34	0.37	0.27	83.1	790.6	574.4
Inferred	39,953	37.20	0.58	0.40	47.8	510.6	352.4

Assumptions used in the 2015 Corani Feasibility Study Mineral Reserve estimate and economic analysis by GRE and M3 are:

- Silver Price=\$20.00/oz.; Lead Price=\$0.95/lb.; Zinc Price=\$1.00/lb.
- Variable NSR cut-off values from \$11/tonne to \$23/tonne at different times in the production schedule to manage mill requirements and maximize project economics.
- Metallurgical testing of the Corani ore started in 2005 and over 500 batch flotation tests were completed since. The previous interpretation of test results was a classification of recovery performance into 4 "metallurgical types" from 9 mineralization ore codes applying an average recovery to each metallurgical type. These groups exhibited a large variation in flotation recovery. Recent analysis of metallurgical test work indicates that recovery is strongly related to the presence and/or absence of oxide minerals. Using advanced statistical methods (including classification cluster analysis and nonparametric regression analysis), zinc grade, mineralogy from geologic logs, and elevation were identified as good indicators of oxidation and as a result, good predictors of recovery. These parameters were used to develop statistical numerical models to much more accurately predict recovery. Validation testing shows the new model projections of recovery closely fit all available metallurgical test work data.
- The new recovery model was used for pit optimization, mine planning, and production scheduling. The overall result was approximately 8% increase in silver and zinc recovery and an 8% decrease in lead recovery from those cited in the 2011 Feasibility Study.

The Mineral Resource pit shell is a Whittle pit based on the following input assumptions:

- Silver Price=\$30.00/oz.; Lead Price=\$1.425/lb.; Zinc Price=\$1.50/lb.
- Mixed oxide material that was not economic by flotation processing was not included in the Mineral Reserves, however, this material is included in the Mineral Resources.
- The Mineral Resource cut-off was \$9.49/tonne processing cost, plus \$1.51 G&A cost which represents the internal process cut-off.
- The potentially leachable mixed oxide material that fell within the Mineral Resource pit shell was included as a silver resource cut-off grade of 15g/tonne and block elevation above 4900 meters.
- Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability.

All diamond drilling at Corani has been performed using HQ diameter core with recoveries averaging greater than 95%. Core is logged and split on site under the supervision of Bear Creek geologists. Sampling is done on two-meter intervals and samples are transported by Company staff to Juliaca, Peru for direct shipping to ALS Chemex, Laboratories in Lima, Peru. ALS Chemex is an ISO 9001:2000-registered laboratory and is preparing for ISO 17025 certification. Silver, lead, and zinc assays utilize a multi-acid digestion with atomic absorption ("ore-grade assay method"). The QC/QA program includes the insertion every 20th sample of known standards prepared by SGS Laboratories, Lima. A section in Bear Creek's website is dedicated to sampling, assay and quality control procedures.

The foregoing disclosure regarding the Corani project contains forward-looking statements that are based on a number of assumptions which may prove to be incorrect, including but not limited to: the availability of financing of the Company's Corani project; the Company's ability to attract and retain skilled staff; the estimated timeline for the development of the Corani project; the supply and demand for, and the level and volatility of the price of silver, lead and zinc; the timing of the receipt of regulatory and governmental approvals, the supply and availability of consumables and services; the accuracy of the Company's resource and reserves estimates and the geological and metallurgical assumptions (including the size, grade and recoverability of mineral resources and reserves) and operational and price assumptions on which the resource estimates are based; market competition; the Company's ongoing relations with its employees and local communities; and general business and economic conditions. There is also no certainty that the results of the FS will ever be realized. Should one or more of the risks or uncertainties involved in forward-looking statements relating to the FS materialize, or should the assumptions underlying the FS prove incorrect, actual results of the FS may vary materially from those anticipated, believed, estimate or expected. See also "Forward-Looking Information" above.

3.2) Santa Ana Silver Project

The 100%-owned Santa Ana silver project ("Santa Ana") is located 120 kilometers southeast of the city of Puno, Department of Puno, Peru at an elevation of 4,150 to 4,300 meters. The project encompasses 5,400 hectares of mineral concessions. An updated feasibility study on Santa Ana, which incorporated three-stage crushing of ores, was completed on January 19, 2011. Further development of the project has been postponed pending resolution of the international arbitration proceeding concerning the Peruvian Government's expropriation of the Santa Ana Project and other violations of international law.

As described in the 2011 Santa Ana feasibility study, the Santa Ana Project contains Proven and Probable Mineral Reserves totaling 63.2 million ounces of silver as well as Measured and Indicated Resources containing 72.8 million ounces of silver and Inferred Resources of 28.2 million ounces of silver. Bear Creek acquired the mining concessions in full compliance with Peruvian law, as is confirmed by Supreme Decree 083, issued by the President of Peru and the Council of Ministers on November 29, 2007. Bear Creek performed significant exploration work and undertook a comprehensive Environmental and Social Impact Assessment shortly thereafter.

On June 25, 2011 the the Official Gazette "El Peruano" published Supreme Decree DS-032-2011 (the "2011 Supreme Decree") that revoked Supreme Decree DS-083-2007 issued in 2007, (the "2007 Supreme Decree") which granted the Company the right to acquire title to and operate on the mineral concessions covering the Santa Ana Project within an area 50 kilometers of the Peruvian territorial boundaries. The 2011 Supreme Decree rescinded, without legal grounds or an opportunity to be heard, the Company's rights to operate on the concessions; however, the titles to the concessions continue to be held by the Company.

The Santa Ana Project, which is supported by the local communities surrounding the proposed mine site, would have created 2,500 direct and indirect jobs in the southern Puno Region, and would have brought important infrastructure improvements to the area. The Santa Ana Project would also provide approximately \$330 million in federal taxes, much of which would benefit local communities. However, given the Peruvian government's lack of good faith efforts in negotiating a settlement agreement within the prescribed limitations period under the Canada/Peru Free Trade Agreement (FTA), Bear Creek commenced international arbitration under the Rules of the International Centre for the Settlement of Investment Disputes (ICSID) against the Peruvian government. Bear Creek seeks monetary damages resulting from Peru's breaches of provisions under the FTA and international law. A negotiated settlement has become unlikely. Substantially all detailed engineering and project development activities at Santa Ana have been completed, but any remaining work has been placed on hold since the third quarter of 2011, pending resolution of the Company's legal actions against the Peruvian Government.

Background of legal action at Santa Ana, Recently Developments and Project Status

On July 12, 2011, the Company commenced a constitutional lawsuit in Peru, known as an "Amparo", against the Peruvian Government. The objective of the Amparo was to seek a determination that the 2011 Supreme Decree violates the Company's rights under the Peruvian Constitution and is therefore unlawful. On May 12, 2014, as set forth more fully below, the Lima First Constitutional Court issued a ruling in the Company's favor holding that the Peruvian Government, among other things, had violated the Company's constitutional rights and that all rights should be returned to the Company as per the 2007 Supreme Decree. The Peruvian Government appealed that decision. In connection with the international arbitration proceeding

described below, as required by the Free Trade Agreement between Canada and Peru ("Canada-Peru FTA"), the Company discontinued the Amparo action it had commenced against the Peruvian Government with respect to the 2011 Supreme Decree.

On February 6, 2014, the Company officially notified the Peruvian Government with a Notice of Intent to Submit a Claim to Arbitration ("Notice of Intent"), under the Canada-Peru FTA, which initiated a six-month consultation period between the parties during which time they were to continue to attempt to amicably settle the dispute. Because no amicable settlement resulted during that six-month period, the Company initiated international arbitration proceedings against Peru in accordance with the Canada-Peru FTA.

On August 11, 2014, and after the six-month negotiation period under the Canada-Peru FTA expired without the parties reaching an amicable resolution of the dispute, despite many meetings between the Company and the Peruvian Government to that end, the Company submitted a Request for Arbitration to The International Center for Settlement of Investment Disputes ("ICSID") against the Republic of Peru pursuant to the terms of the Canada-Peru FTA. The Company submitted its memorial on the merits on May 29 2015 and is seeking full reparation for, among other things, the Peruvian Government's expropriation of Santa Ana as well as resulting damages to the Corani project. In its Memorial on the Merits, the Company articulated factual and legal arguments supporting its claims against the Peruvian Government. In its Memorial on the Merits, the Company also calculated the damages sustained with respect to the expropriation of Santa Ana as the Fair Market Value ("FMV") of the Santa Ana project on the date immediately prior its expropriation by the Government. The Company estimated the FMV of the Santa Ana Project at \$224.2 million as of June 23, 2011 using the discounted cash flow analysis ("DCF), excluding interest. The Company also estimated the damages to Corani resulting from Peru's expropriation of Santa Ana at \$170.6 million, excluding interest. Accordingly, the Company requested that the Tribunal award it the sum of \$522.2 million, which includes pre-award interest of 5.0% per annum, compounded annually, up to the estimated date of the award (March 15, 2017). Peru submitted its Counter-Memorial on October 6, 2015, and the Company submitted its Reply to Peru's Counter-Memorial in early January 2016. Peru's Rejoinder to the Reply was submitted to ICSID and the Tribunal in mid-April and a final submission from the Company was filed in late May 2016.

The oral hearing before the Arbitration Tribunal will take place in Washington D.C. on September 7 - 14, 2016. Following the hearings, as well as post-hearing submissions in December 2016 and January 2017, the Tribunal will commence its deliberations. A decision on Bear Creek's case is anticipated within the second half of 2017, although there is no prescribed deadline for the Tribunal's ruling.

The aforementioned filings are available on ICSID's website at <https://icsid.worldbank.org/apps/ICSIDWEB/cases/Pages/casedetail.aspx?CaseNo=ARB/14/21&tab=DOC>.

During the six months ended June 30, 2016, the Company incurred expenditures of \$0.2 million on the Santa Ana project in addition to ongoing legal related costs associated with its submissions for its international arbitration case amounting to \$1.6 million. The Company has budgeted costs of \$2.9 million in 2016 for the Santa Ana project and arbitration case.

4) Exploration Projects

The Company had reduced its exploration activities over the past several years, as a result of difficult market conditions, in order to preserve cash, while still maintaining its obligation

requirements under Joint Venture ("JV") agreements. The Company maintains a core exploration staff in order to manage its joint venture exploration projects. The Company has budgeted \$0.4 million for these exploration programs in 2016.

4.1) Maria Jose Prospect

Maria Jose is located in the Department of Ancash, 140 kms NNW of Lima. The project is comprised of Cretaceous to Paleocene diorites and granitoids of the Coastal Batholith hosting a system of east-west to northeast trending, 45° to steeply north dipping, mesothermal quartz veins and shear zones containing high gold grade - silver values. At surface, the five main east-west veins can be traced for approximately 500 meters; however, shallow cover is prevalent in the district and the possibility of much longer strike lengths is being investigated by shallow trenching and sampling. The total vein lengths observed is approximately 54km. The observed veins range in thickness from 0.20 meters to 34.5 meters with average widths of ~1 meter. Exposed vein intersections reach up to 34.5 meters, averaging 27.2 g/t gold. To date, mapping and channel sampling (237 samples) of seven veins yielded values ranging from 1.0 g/t to 233 g/t gold. In one of the veins ("Mari"), systematic channel sampling performed on the Mari vein exposed 158 meters of strike length with an average grade of 19 g/t gold over a true average width of 0.84 meters.

In early 2015, the Company entered into an earn-in agreement with a private Peruvian gold producer to explore and develop this gold-quartz vein system. The Company has signed a formal option and joint venture agreement with Analytica Mineral Services SAC ("AMS"); a successful Peruvian tunneling contractor and gold producer. AMS will complete 2,000 meters of tunneling and cross-cuts in the vein systems within one year, at its sole cost, in order to earn a 51% undivided interest in the mineral concessions. Following AMS earning its 51% interest, the two parties will form a joint venture agreement with standard terms. The primary purpose of this alliance was to reduce Bear Creek's exploration costs while maintaining a meaningful ownership in partnership with a solid partner.

Under the original option agreement (subsequently renegotiated and now effectively exercised) with a private Peruvian third party, Bear Creek Mining was to acquire 100% of Maria Jose (3,500 hectares) by making escalating payments totaling \$4 million over 4 years. Instead, in December 2015, Bear Creek and its exploration partner, AMS made a negotiated purchase payment of \$1.2M to the underlying owner acquiring a 100% interest in the company holding the mineral concessions. As a result, the Company and AMS now jointly own a 100% interest in the Maria Jose concessions. There are no underlying royalties; however, under the purchase agreement, BCMC and AMS are obligated to pay an additional \$2.1M on commencement of commercial production. This additional payment has no time limits.

AMS has negotiating surface rights agreements with the local community. Negotiations had been delayed due to competing offers made by a private Peruvian family seeking to gain control of the surface rights covering the Company's optioned mineral concessions. The Company and its counsel believe that the surface rights disputes have been resolved.

AMS will commence road access construction to the tunneling sites in August and believes that the Environmental Impact Assessment required for the tunneling work will be approved in September. The tunneling program, designed to explore for high-grade gold mineralization in the veins and establish resource potential, is anticipated to commence in October.

4.2) Le Yegua Copper-Gold-Molybdenum Prospect

The La Yegua copper-gold-molybdenum prospect is located in central Peru approximately 20 kilometers northeast of the Los Chancas copper/gold/molybdenum deposit in a prolific porphyry copper belt also containing the Las Bambas, Huaquira, Constancia, Tintaya and Antapaccay deposits.

In October 2010, Bear Creek entered into a joint venture agreement with Japan Oil, Gas and Metals National Corporation ("JOGMEC") to advance the La Yegua Project to phase II drilling. The agreement provides for JOGMEC to earn a 51% interest through investing \$3M over a three-year period. JOGMEC has met its earn-in expenditures and acquired an undivided 51% interest in the project. To date, the Company has elected to not contribute its pro-rata share in exploration drilling and has diluted its interest to 36%. Under the agreement, the Company can dilute its interest until reaching 10%, at which time the Company's interest will revert to a 1.0% NSR. Presently, JOGMEC has earned a 64% interest in La Yegua through direct funding of drilling.

Various drilling campaigns totaling 6,633 meters have been completed by JOGMEC. Copper mineralization was encountered in numerous intercepts on the order of 60 to 115 meters grading on the tenure of 0.2-0.4% Cu and up to 100 ppm Mo. The mineralization is not felt to be economic under current market conditions and JOGMEC terminated the joint venture in July 2016 giving Bear Creek back its 100% undivided interest. The Company has minimal holding costs through June 2017 during which time it will likely seek a new partner to further exploration.

4.3) Sumi Gold Prospect

The Company acquired a 100% interest in the Sumi gold prospect by staking in 2011. Sumi is comprised of 1,200 hectares located in the gold-silver tertiary-age epithermal belt in central Peru.

In March 2014, Bear Creek entered into a joint venture agreement with Japan Oil, Gas and Metals National Corporation ("JOGMEC") to advance phase II drilling to test additional blind vein-breccia targets plus a possible buried Cu porphyry source underlying the large epithermal mineralization footprint exposed at the surface. The agreement provides for JOGMEC to earn a 51% interest through investing \$2.5 million over a three-year period. Following JOGMEC's earn-in, Bear Creek can elect to maintain its 49% interest or to dilute until reaching 10%, at which time the Company's interest will revert to a 1.0% NSR.

Currently, one diamond drill hole is in progress which is estimated to total 600 meters. The program is limited to only one hole thus far due to delays in negotiating surface agreements with the community holding the majority of the surface rights over the target area. Drilling thus far has encountered encouraging porphyry copper (gold) style alteration; however, assay results are pending.

Negotiations of the remaining surface rights are in progress to acquire community agreements with results expected in the third quarter of 2016. Contingent upon the negotiations, additional drilling will be planned thereafter. Access rights to the remaining untested target area have proven to be very challenging and the future of the joint venture depends on successfully acquiring access.

4.4) Generative Exploration

Generative exploration has historically been a crucial part of the business of identifying and acquiring new opportunities. However, as a result of the Company's focus on the Corani and Santa Ana Projects, generative exploration efforts have been temporarily reduced. Generative exploration costs are those costs not attributable to a specific Bear Creek project. When Bear Creek defines a project as a distinct exploration target, it is then accounted for as a separate project.

IGV

IGV ("Impuesto General a las Ventas" - Peruvian value added tax) expense of \$0.3 million represents IGV that was paid to the Peruvian Government during the period ended June 30, 2016. This amount is expected to be recoverable when the Company generates future revenues in Peru.

Since the Company is in the exploration stage and there is no assurance that future revenues will be generated in Peru, IGV has been expensed as incurred. IGV is denominated in Peruvian soles, with the total cumulative amount of IGV paid by the Company as of June 30, 2016 being \$12.9 million (42.7 million soles). IGV credits can be carried forward indefinitely.

Other Properties

Other properties are exploration properties which management has decided are not a priority or which management has chosen not to pursue and, therefore, has terminated option agreements.

5) Results of Operations

Six months ended June 30, 2016 as compared to the six months ended June 30, 2015.

For the six months ended June 30, 2016 the Company incurred a net loss of \$4.6 million and a loss per share of \$0.05 which was significantly lower than the net loss of \$8.6 million and the loss per share of \$0.09 for the six months ended June 30, 2015. This is a result of the efforts of the Company to reduce expenses to only the core necessities.

In the six months ended June 30, 2016, spending on the Corani property decreased by \$2.5 million and the Santa Ana arbitration costs increased by \$0.4 million in comparison to the six months ended June 30, 2015. The cost of preparing the Corani FS in the current year was significant but the total current period Corani costs were lower than the prior year because of the continued efforts by the Company to reduce expenses. The Santa Ana costs were higher due to the cost associated with the international arbitration, specifically the required submissions filed in January and May 2016. There was also a decrease of \$0.7 million in exploration and evaluation costs relating to other properties and a \$0.2 million decrease in share-based compensation expense. The decrease in share-based compensation was due to the lower number of options granted in 2016 as compared to 2015, in addition to timing as the options were granted in the second quarter of 2016 while they were granted in the first quarter of 2015. The Company had a foreign exchange gain of \$0.2 million in the current period compared to a \$0.6 million loss in the comparative period. The foreign exchange gain and loss is primarily attributed to the Company maintaining a portion of its cash reserves in Canadian dollars. During the current period, the Canadian dollar strengthened relative to the US dollar.

Three months ended June 30, 2016 as compared to the three months ended June 30, 2015.

For the three months ended June 30, 2016 the Company incurred a net loss of \$3.0 million as compared to a net loss of \$4.0 million for the three months ended June 30, 2015, a decrease of \$1.0 million. The Company's loss per share for Q2 2016 was \$0.03, as compared to a loss per share of \$0.04 for Q2 2015.

During the three months ended June 30, 2016, spending on the Corani property was \$0.9 million which was a decrease of \$1.3 million from the \$2.2 million spent in the three months ended June 30, 2015. The Corani costs were lower in the current quarter due to the continued efforts by the Company to reduce expenses. The Santa Ana arbitration costs increased by \$0.3 million to \$1.2 million from \$0.9 million as the Company submitted additional arbitration documents in May 2016. There was a decrease of \$0.1 million in exploration and evaluation costs relating to other properties and a \$0.1 million increase in share-based compensation expense. The increase in share-based compensation was due to an increase in the share price as well as timing.

Summary of Quarterly Results

The following table sets out selected unaudited quarterly financial information of the Company and is derived from unaudited interim consolidated financial statements prepared by management. The Company's interim consolidated financial statements are prepared in accordance with IFRS applicable to interim financial statements, and are expressed in US dollars. The presentation currency is the US dollar.

Period	Revenues	Loss for the period (in millions)	Basic and fully diluted loss per share
2 nd Quarter 2016	Nil	\$3.0	\$0.03
1 st Quarter 2016	Nil	\$1.6	\$0.02
4 th Quarter 2015	Nil	\$2.9	\$0.03
3 rd Quarter 2015	Nil	\$3.3	\$0.04
2 nd Quarter 2015	Nil	\$4.0	\$0.04
1 st Quarter 2015	Nil	\$4.6	\$0.05
4 th Quarter 2014	Nil	\$3.4	\$0.04
3 rd Quarter 2014	Nil	\$5.0	\$0.05

The increase in loss in the 2nd quarter of 2016 relates to the increase in costs associated with the Santa Ana arbitration as well as an increase in stock based compensation expense as a result of options granted during the quarter.

The decrease in loss in the 1st quarter of 2016 relates to the Company focusing on minimizing its overall expenditures in order to preserve its cash position. Except for the costs associated with the Santa Ana arbitration, all costs were reduced during the three months ended March 31, 2016.

The increase in loss in the 3rd quarter of 2014 relates primarily to increase of focus on engineering optimization with the Corani project as well as legal costs related to the Company's negotiations related to its Santa Ana dispute.

The principal factors that can cause fluctuations in the Company's quarterly results include the timing and valuations attributable to stock option grants, expenditure levels on exploration projects, impairment losses on exploration projects and foreign exchange gains or losses related to Canadian dollar cash balances.

6) Liquidity and Capital Resources

Of the \$15.1 million in cash and cash equivalents and short term investments, as of June 30, 2016, approximately \$4.1 million (CDN\$5.2 million and Soles 0.2 million) was denominated in Canadian dollars and Peruvian soles, with the remaining balance in US dollars. The Company's major exploration and development expenditures for 2016 are expected to be denominated in US dollars. The Company generally invests its cash and cash equivalents in either Canadian government backed paper or in Canadian chartered bank corporate paper with short-term maturities. The Company had a cash outflow from operating activities of \$4.6 million compared to \$7.0 million in the comparative period in 2015. This reduction is primarily a result of reduced exploration activities in the Company.

As of June 30, 2016, the Company's net working capital was \$14.5 million compared to net working capital of \$18.6 million as of December 31, 2015. Cash and cash equivalents at June 30, 2016 totaled \$15.1 million compared to \$19.4 million as of December 31, 2015. The decrease in cash and cash equivalents principally resulted from expenditures for ongoing Corani evaluation costs and costs associated with the Santa Ana arbitration and other operating activities during the year, net of working capital adjustments.

On July 26, 2016, the company closed the bought deal financing and the Company received gross proceeds of CDN\$29.9 million.

The Company believes its current cash balances are sufficient to fund its planned exploration and corporate overhead activities for at least the next twelve months. The business of mining and exploration involves a high degree of risk and there can be no assurance that current exploration and development programs will result in profitable mining operations in the future. The Company has had no source of revenue to date, and has significant cash requirements to fund its development project capital requirements, continue with its exploration programs, administrative overhead and maintain its mineral properties.

The following table summarizes the contractual maturities of the Company's financial liabilities, and operating and capital commitments at June 30, 2016:

(000's)	2016	2017	2018	2019	2020 and Beyond	Total
Accounts payable and accrued liabilities	\$ 1,000	\$ -	\$ -	\$ -	\$ -	\$ 1,000
Provisions	-	-	-	-	200	200
Other liabilities	241	124	100	100	158	722
Operating leases	60	71	74	-	-	205
	\$ 1,301	\$ 195	\$ 174	\$ 100	\$ 358	\$ 2,127

As August 23, 2016, the Company had 103,085,064 outstanding common shares. The Company also had 7,453,850 share purchase options outstanding with a weighted average exercise price of CDN\$2.78.

7) Related Party Transactions

Trading Transactions

Certain of the Company's officers and directors render services to the Company as sole proprietors or through companies in which they are an officer, director or partner.

	Nature of transactions
DuMoulin Black LLP	Legal fees
Estudio Grau S.C.R.L.	Legal fees
Avisar Chartered Accountants	Accounting fees

The Company incurred the following fees and expenses in the normal course of operations in connection with related parties.

	Three Months Ended June 30		Six Months Ended June 30	
	2016 (000's)	2015 (000's)	2016 (000's)	2015 (000's)
Legal fees – DuMoulin Black LL	\$ 59	\$ 44	\$ 89	\$ 100
Legal fees – Estudio Grau S.C.R.L.	14	-	45	-
Accounting fees	38	53	63	89
	\$ 111	\$ 97	\$ 197	\$ 189

Amounts due to related parties are unsecured, non-interest bearing and due on demand. Accounts payable at June 30, 2016 included \$46,828 (December 31, 2015 - \$17,793) which were due to individuals or companies whose officers, directors or partners were also officers or directors of the Company.

Compensation of Key Management Personnel

The remuneration of the directors, president and chief executive officer, and the chief operating officer (collectively, the key management personnel) for the period ended June 30, 2016 and 2015 were as follows:

	Note	Three Months Ended June 30		Six Months Ended June 30	
		2016 (000's)	2015 (000's)	2016 (000's)	2015 (000's)
Salaries and directors' fees	(i)	\$ 211	\$ 224	\$ 416	\$ 420
Share-based compensation	(ii)	278	185	328	486
		\$ 489	\$ 409	\$ 744	\$ 906

- (i) Key management personnel were not paid post-employment benefits, termination benefits, or other long-term benefits during the three and six months ended June 30, 2016 and 2015.
- (ii) Share-based compensation represents the non-cash expense for the three and six months ended June 30, 2016 and 2015, translated at the grant date foreign exchange rate.

8) Key Accounting Estimates and Judgments

The preparation of financial statements in conformity with generally accepted accounting principles requires management to use estimates and assumptions that affect the reported

amounts of assets and liabilities, as well as revenues and expenses. Management's critical accounting estimates are summarized below:

Asset carrying values and impairment assessment

In accordance with the Company's accounting policy each asset or cash generating unit is evaluated every reporting period to determine whether there are any indications of impairment. If any such indication exists, a formal estimate of recoverable amount is performed and an impairment loss is recognized to the extent that the carrying amount exceeds the recoverable amount. The recoverable amount of an asset or cash generating group of assets is measured at the higher of fair value less costs of disposal and value in use.

The determination of fair value less costs of disposal and value in use requires management to make estimates and assumptions about expected production, sales volumes, commodity prices, reserves, operating costs, closure and rehabilitation costs and future capital expenditures. The estimates and assumptions are subject to risk and uncertainty; hence there is the possibility that changes in circumstances will alter these projections, which may impact the recoverable amount of the assets. In such circumstances some or all of the carrying value of the assets may be further impaired or the impairment charge reduced with the impact recorded in the income statement.

Determination of the fair value of stock-based compensation

The fair value of share-based compensation granted is computed to determine the relevant charge to the statement of operations. In order to compute this fair value, the Company uses the Black-Scholes option pricing model, which requires management to make various estimates and assumptions in relation to the expected life of the award, expected volatility and the risk free rate.

9) Financial Instruments

The Company's financial instruments as at June 30, 2016 consist of cash and cash equivalents, short-term investments, receivables, accounts payable and accrued liabilities, and other liabilities. The fair value of these instruments approximates their carrying value. There were no off-balance sheet financial instruments.

Cash and cash equivalents other than the minor amounts held in Peruvian soles consist solely of cash deposits with major Canadian banks.

The Company does not use derivative or hedging instruments to reduce its exposure to fluctuations in foreign currency exchange rates involving the Canadian dollar or Peruvian Sol.

10) Disclosure Controls and Procedures

In connection with National Instrument 52-109 (Certificate of Disclosure in Issuer's Annual and Interim Filings) ("NI 52-109"), the Chief Executive Officer and Chief Financial Officer of the Company have filed a Venture Issuer Basic Certificate with respect to the financial information contained in the consolidated financial statements for the period ended June 30, 2016 and this accompanying MD&A (together, the "Annual Filings").

In contrast to the full certificate under NI 52-109, the Venture Issuer Basic Certificate does not include representations relating to the establishment and maintenance of disclosure controls

and procedures and internal control over financial reporting, as defined in NI 52-109. For further information, the reader should refer to the Venture Issuer Basic Certificates filed by the Company with the Annual Filings on SEDAR at www.sedar.com.

Approval

The Audit Committee of Bear Creek has approved the disclosure contained in this MD&A.

Additional Information

Additional information relating to Bear Creek is available on SEDAR at www.sedar.com
